LibreOffice is a powerful cross-platform open-source productivity suite for Windows, Mac OS X, and Linux, that combines office-suite features with advanced PDF creation, spreadsheet, database, and drawing capabilities. The application supports most of the Open Document Format (ODF), including Open Document Spreadsheet, OpenDocument Presentation, OpenDocument Text, and OpenOffice.org Impress presentations, and the OpenOffice.org Calc database. LibreOffice is made available under the GNU General Public License (GPL). The program has been distributed since 2002 and was created by the Documenta family. The usage of LibreOffice can be divided into three major categories: 1) entry, 2) spreadsheets, databases, presentations, 3) advanced features. In the first instance, the package allows users to edit a spreadsheet by adding columns or rows, format cells, insert shapes and textboxes, format and edit text, and insert formulas and charts. Furthermore, LibreOffice provides a limited version of a word processor, in which users can create a document with tables, insert graphics and photographs, and link to other documents and webpages. During a 1-2 day trial, the software's ability to open Word documents and save a document in OOXML format can be a challenge. Also, the software's compatibility with file formats may require the user to convert or convert many files to the OOXML format. Several useful features, such as the ability to work with webpages, spreadsheets, and databases, are not available during the trial period. LibreOffice is available
