. 7 i need driver for samsung rv-s5147. 1.0.14.1 BetaÂ Â· royal admin crack 16.6 Â· Windows 7 Bitwise Commander Crack 1.8.3.18. Registration number is 3206271 Â· Crack Keygen crack registration japanese new world emperor mahjong3. 15.0.0.30142.1769 crack free download Â· ADOBE PHOTOSHOP CS7 FULL VERSION - REGISTRATION NUMBER and CATALOG ID IS Â· Q: how to use a dictionary in python I want to use a dictionary in python. Basically my code looks like this: #Dict Data test_value = {'key1': ['value1', 'value2', 'value3'], 'key2': 'value4'} for key, value in test_value.iteritems(): if key=='key1': count = len(value) And I'm getting an error on the line value = len(value): NameError: name 'value' is not defined I've tried without the 'value' before and after the len(value), but that didn't work. How can I get this? A: The value from the dictionary doesn't match the name of a variable you've defined. You can just rename it to a different name, for example: #Dict Data test_value = {'key1': ['value1', 'value2', 'value3'], 'key2': 'value4'} for key, values in test_value.iteritems(): if key=='key1': count = len(values) A: As Rakesh says, the value of test_value.iteritems() has a name but you can't use it in your for loop because it doesn't have the same value as the name you want to loop
