Learn moreIn a study on high-prevalence pediatric epilepsies, we delineated a group of four infants (from an ongoing study of congenital hemiplegia) with 'focal seizures', and a strikingly similar pattern of developmental and epileptogenic abnormalities, involving the frontotemporal cortex and hippocampus. We have recently extended this study to a series of 12 unselected patients with severe focal epilepsies. Neuropathological abnormalities were most consistent with dysplasia of the hippocampus and parahippocampal gyrus. Tractographic studies, with diffusion and anisotropy measures derived from in-vivo MRI in combination with MRI-derived tractography, revealed diffusional abnormalities within these areas, including reduced fractional anisotropy and increased mean diffusivity, in keeping with the observed changes on histology, and previously unreported in pediatric patients. These changes were observed in the patients with the most severely limited intellectual development. These data provide direct evidence for a relationship between early neuropathological defects in the hippocampus and later cognitive impairment. A cohort of 12 infants

 Game Introduction: In this project, you will find a cheating platform car detailing simulator game based on mobile game (Facebook) that I made in the past. So you only need to build the hardware and a base code. You just need to unlock the car model, increase the speed of the car, and get hints about how to avoid obstacles on the way. Solution: So let's start. First you will need to create a car modeling platform, and add a car controller module and a picture studio module. Finally connect the whole project and test it. Below is the link of project files. Step 1: Now let's build a car modeling software. We will use advanced 3D modeling tools to create these soft body parts. For creating a simple model, the modeling package you can use is probably STL format. This link show you how to use 3D modeling software for beginners. Draw a shape with following options. Computer Generated Mesh Polygon Surface of a shape Add Normal Map: We will try to adjust the normal to make the body surface looking more realistic. This is a simple keyframe animation for debug. If you connect a camera module and play this animation, a wireframe mode will appear. It will help you understand how 3D modeling software works. [UPDATE] This step will create a base model for the car. It will be used to make some simple modeling tools. The car part you will download and use is called Vbeam Model 3-S. Download it here. Step 2: Create a controller module for this Car Modeling Software. We will use a one motor module. This should be enough to rotate the car. The language we choose is the C and C++ language because we will try to make the module and software extensible. The communicate module could be written in the Python language. Create a box naming b_controller in your STEP: Add motor file in b_controller as shown below: Add Text file name init_speed in your b_controller folder: Add file called b_draw in your b_controller folder: Add file called b_draw_function in your b_controller folder: Add file called b_draw_arduino_help in your b_controller folder: Now compile it. Run b_draw file and see how it

You're part of Archtower, a brave family clan that sets its sights on the place that's known as the Tower. What awaits there? That's the story! Similar to other roguelite games, Archtower follows the classic RPG formula: - You have a limited number of lives. Die, you'll lose everything. - The game is over when you are dead. You have no way of restarting a game, and so every choice you make has a consequence. - On a higher difficulty, you start with a smaller number of lives. Die, you'll lose one life. To avoid this, you'll need to take your time, explore all the secrets of this place, and build a character that will allow you to continue. There is a genuine sense of adventure in this simple system, as your characters will start out with only some poor equipment to help them on their quest. At first, the Tower will seem like an impenetrable fortress, but after playing for a while, it will unveil its secrets and allow you to explore it, fight with various enemies and defeat them. The Tower is generated procedurally. This allows you to play in a familiar environment, to discover new stages of the game, and to take on the challenges of progressively higher difficulties. The Tower is inhabited by various enemies. You'll fight with them and, if you defeat them, you'll be rewarded with prizes. There are also friendly creatures that are willing to help you in your quest, and even take you to the living quarters of the Tower. You'll also discover allied dungeons, which can be accessed from the Tower. These are usually less complicated than the dungeons you'll find in Archtower. The Tower is a living place, and the related buildings will automatically update their data, affecting your character's experience. For example, each time you visit the Attendant, his shop will have some upgrades, and you will receive Fame for your clan. The size of the shop window will also depend on your clan level, and your character will have a skill that allows you to see the signal strength of the connections between allies. Furthermore, the Tower offers you a way to develop your clan. Meet new clans, do quests and compete for Fame. Maybe you will become a powerful clan and earn the right to challenge the rest of the world! Where to Find Us: The Tower can be found in the vast and mysterious lands of Yath. Since it is procedurally generated, each new
