Portable Keyboard Statistics Crack + [Win/Mac]

Portable Keyboard Statistics is a small software application whose purpose is to help you record all keystrokes with minimal effort. The advantages of being portable Since this is the portable version of the program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to capture pressed keys on the breeze, without having to go through installation steps. Simple looks You are welcomed by a clean feature lineup that empowers you to tweak dedicated parameters with just a few clicks. Everything is kept as basic as possible, so there's support for only a few configuration settings that you can play with. Main features Portable Keyboard Statistics gives you the freedom to gather information about each pressed key, namely key name, virtual code, hexadecimal value, as well as the number of times each key has been pressed. Basically, the application builds up statistics about the pressed keys and is able to remember them when you close and reopen the main panel. What's more, you are allowed to start or stop the monitoring process and automatically activate the key recording mode when you run the utility.

Last but not least, it is important to mention that Portable Keyboard Statistics automatically exports the information to XML file format after you close the program. The XML file is saved to the same location where the EXE item is stored. Performance During our testing we have noticed that Portable Keyboard Statistics carries out a task quickly, and no errors showed up throughout the entire process. It doesn't eat up a lot of CPU and memory, so the overall performance of the computer is not affected.

Bottom line All in all, Portable Keyboard Statistics offers a straightforward software solution for helping you gather statistics about captured keystrokes. Portable Keyboard Statistics Description: New!Pro Features * WORD, RTF, TXT, HTML, HTML (plain) and plain XML export formats support. * Sound recording option available. * Audio recording of what you type. Can be played or used to create a sound file. * Keystroke timing information. * Tablet feature available. * Supports auto-start when launched. * Can be installed in all user paths (system/admin/program files etc...). * Integrated language translation service. * Support for wpa/wpa2/wep security types

●Keycode recorder●Captures keystroke information (the virtual keycode, keyname, number of times pressed, etc.).●Start/Stop capturing pressed keys●Start/Stop the keycode capturing mode.●Export keystrokes to XML file.●Easy to use. Other software that can help you with your task is named SeqLog. This free software is available for Windows XP, Vista, 7 and 8. It is highly effective for logging all clicks on the keyboard and sounds that are made, and can save data to a log file on your hard drive or a local network.

Users Review Editors Review Concept and usability 5 By Eric Simple application, works well. Maybe it's me, but I prefer the keyboard detector from Jay's website. Can't open 5 By Trojtar Error: Can't open keylogger.dat! Great app 5 By JBob Excellent keylogger. Just one small issue... the saved xml file does not have any information in the field where it was saved, and clicking on it just shows the main screen. How do I open the log file? 1 By

Alan I used the portable version of this app and it worked fine. Then I installed the full version on my work PC and now I cannot open the main log file at all. Thanks for nothing! Wish there was more logging options 3 By Amine I like the fact that it writes it to a log file but like it helps make the process more dynamic to be able to save from the beginning. The most important thing is to have the logged events stored in the log file I have mentioned. A little more than just a keylogger 4 By Nico A simple tool to record what the user is typing. Also, the timing can be made more accurate by importing an excel file to specify how much time has passed, so you won't miss a single keystroke. Different from What Expected 1 By Aich When it starts to read the keylog file, you want to see what is being logged and that's where the problem is. When you open the application, you only see a splash screen, and when you open the log file, it gives you a blank window. b7e8fdf5c8
